What is EcoVadis?

EcoVadis helps to assess, monitor, and improve sustainability in value chain networks across your organisation and value chain. More than 100,000 companies have assessed their impact in more than 175 countries, spanning over 200 industries. With EcoVadis, companies can collaborate, benchmark, and monitor performance. EcoVadis has a strong focus on companies' supply chains, which is a crucial area of concern in upcoming legislation, such as the Corporate Sustainability Due Diligence Directive (CSDDD) and Corporate Sustainability Reporting Directive (CSRD). By utilising EcoVadis, companies can effectively engage with their suppliers to identify and address potential negative impacts on human rights and the environment throughout their operations and value chain.

The power of EcoVadis

Save time & money
Companies get assessed once and share everywhere. Procurement teams save 80% in costs vs. DIY programmes.

Improve sustainability performance & drive positive change
The supply chain is the most powerful lever for sustainability impact. 75% of assessed companies improve their performance on their second assessment.

Drive innovation
Leading companies are working with high-performance trading partners to develop new sustainable products and revenue opportunities.

Companies that want to become EcoVadis certified, we support with:

Gap analysis

With an EcoVadis Gap analysis, we analyze your existing assessment and give high level recommendations on how to move forward with your current EcoVadis assessment and improve performance in the EcoVadis assessment.

Implementation

When gaps in your questionnaire are identified, we can help set up policies and initiatives with the necessary documentation in order to improve your sustainability strategy and EcoVadis assessment.

Assessment completion

The Terrace helps you from setting up to handing in the EcoVadis assessment and align with EcoVadis, and with you throughout the process.

Companies that seek to assess their supply chain, we support with our 5-step approach:

1. **Supplier selection**
Assess your full ecosystem to identify suppliers based on supply chain risks and opportunities, prioritising those aligned with your sustainability goals.

2. **Gap analysis**
Develop a comprehensive plan aligning with your supply chains' sustainability due dillegence approach, clearly defining their expectations.

3. **Implementation**
Educate suppliers on the EcoVadis methodology, providing guidelines and resources for completing the assessment with necessary documentation.

4. **Assessment completion**
Analyse supplier scorecards, identify improvement areas, and define specific actions and targets for suppliers, based on their results.

5. **Improving & scaling up**
Collaborate with suppliers to develop improvement plans, provide guidance and support for implementing sustainable practices, and consider scaling up successful practices to other suppliers.
